

Brain Industries (Pty) Ltd

WEBSITE PREVIEW

The new brainindustriessa.com

A guided walkthrough of the new website — what visitors see, how it works on every device, and what is needed to go live.

PREPARED FOR THE OWNERS OF BRAIN INDUSTRIES (PTY) LTD · OCTOBER 2026

A website that presents Brain Industries as the specialists you are

The new site replaces the Wix website with a faster, independent and far more informative experience — built to earn the trust of engineers, plant managers and procurement teams in hazardous-area industries.

Positioned as experts

25+ years' experience, a qualified M.I.E and the full Ex lifecycle — classification, supply, installation, audits and certification — are front and centre.

Interactive, not just words

A honeycomb service selector with custom symbols, an Ex quick-reference tool and a step-by-step InspectX walkthrough invite visitors to explore.

Industry-specific information

Where explosive atmospheres occur, zones and protection levels, and the SANS standards behind each service — demonstrating knowledge, not just claiming it.

InspectX given its own stage

A dedicated page and homepage feature for your QR-code-driven inspection system, with the app and manager portal illustrated.

Built for phones

Full-screen menu, swipeable service selector and a call / request-a-quote bar that follows visitors down the page.

Owned, fast and secure

No Wix fees or lock-in. Hosted on GitHub Pages, loads quickly, with POPIA consent, Privacy Notice and PAIA Manual linked throughout.

About

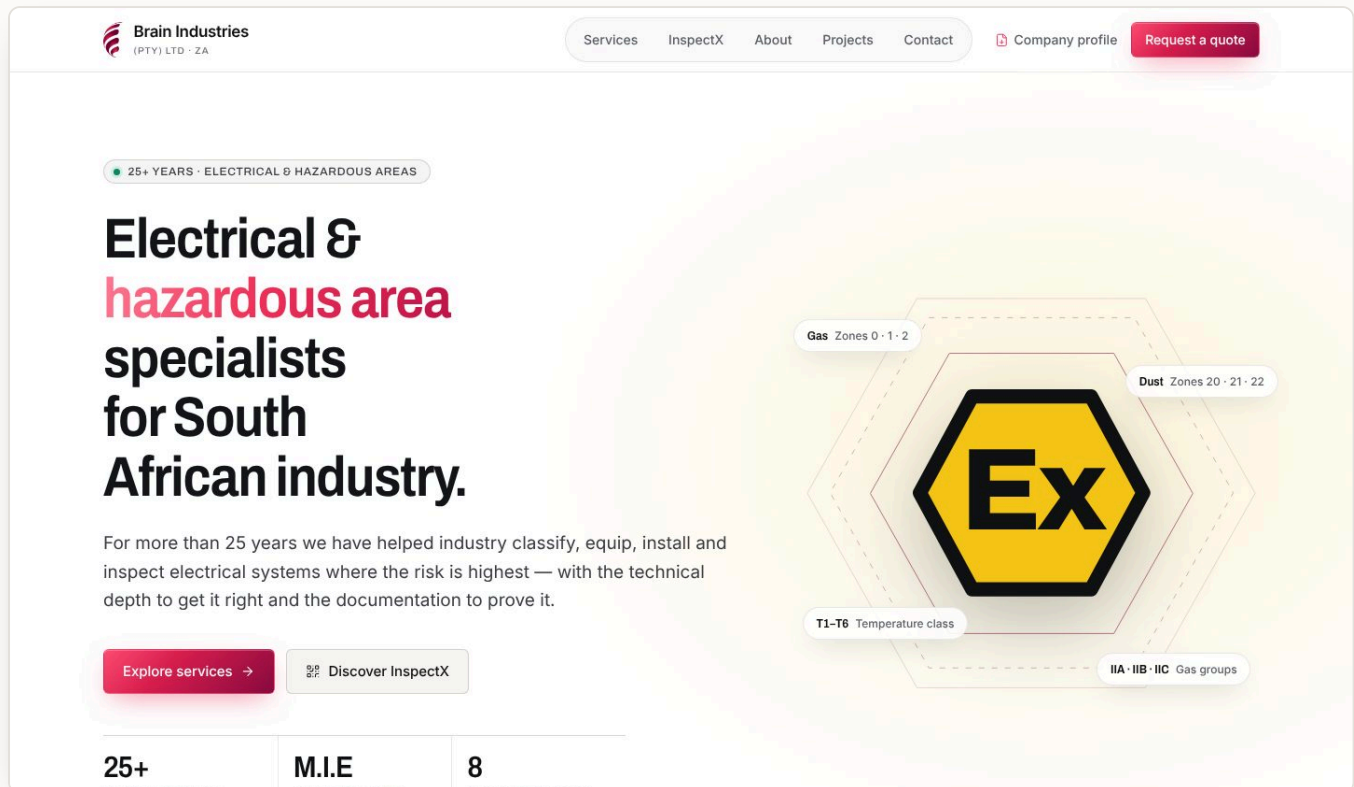

Projects gallery

Contact & quote form

Legal (Privacy · PAIA)

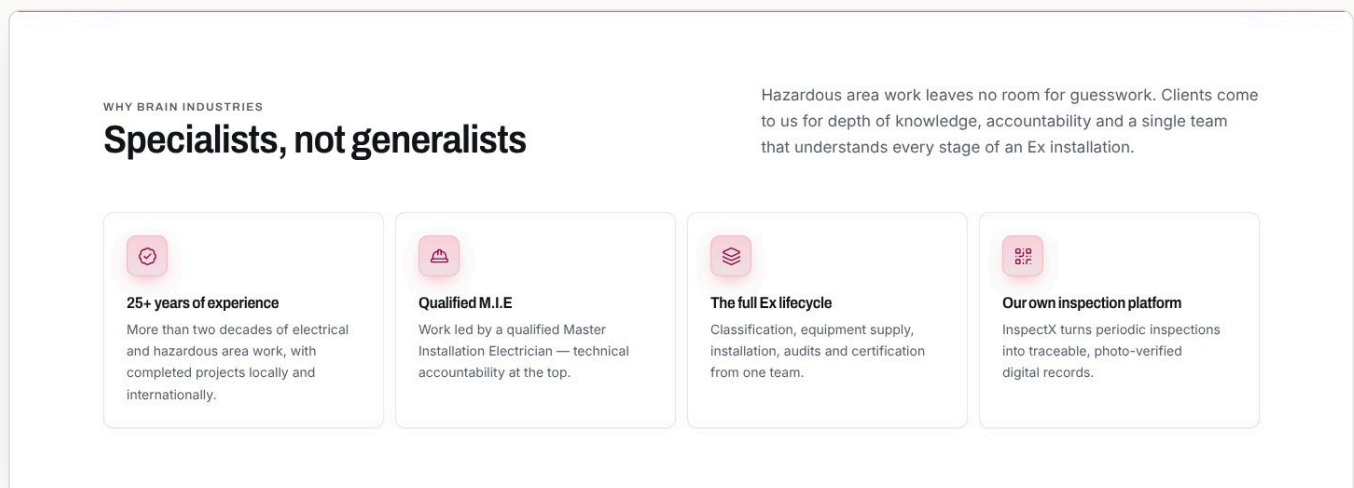

Design language: a bright, clean opening section, then alternating crisp white and soft graphite sections in the Brain Industries wine-and-rose colours. Ex yellow marks products and the Ex symbol; real project photography is used throughout.

First impression

1 Opening section. A bold statement of who you are — *Electrical & hazardous area specialists for South African industry* — beside an animated Ex symbol with slowly turning hexagon rings and floating references to gas and dust zones, temperature classes and gas groups. The 25+ years figure counts up as the page loads.

TRY IT · Watch the hexagon rings turn and the zone labels float

2 Why Brain Industries — “Specialists, not generalists”. Four reasons to choose you: 25+ years of experience, a qualified M.I.E, the full Ex lifecycle from one team, and your own inspection platform.

The service honeycomb

01 // CAPABILITIES

Everything an Ex installation needs, from one team

Select a service to bring it into focus — or let them cycle. Each one opens into a full page with scope and typical applications.

SERVICE · S-01

Hazardous Area Classification

Identifying where explosive gas or dust atmospheres can occur, and defining the zones that govern equipment selection.

- ✓ Identification of sources of release for flammable gases, vapours and combustible dusts
- ✓ Zone definition for gas (Zones 0, 1, 2) and dust (Zones 20, 21, 22) atmospheres
- ✓ Gas / dust group and temperature class (T-rating) determination

3 Every service, one at a time. Services and products sit in a honeycomb of hexagons — echoing the Ex mark — each with its own custom-drawn symbol (wine for services, Ex yellow for products). Click a hexagon to bring that service into focus; left alone, they cycle automatically with a progress bar.

TRY IT · Click any hexagon, or use the arrow keys

PRODUCT SUPPLY · P-02

Auto Bindicators

Rotary paddle level indicators for bins, silos and hoppers holding bulk solids.

- ✓ Rotary paddle level indication for bulk solids
- ✓ High, low and intermediate level detection
- ✓ For bins, silos, hoppers and chutes

[Explore product →](#) [Enquire](#)

Each focus panel shows a short description, three key points, a photo or illustration, and buttons to open the full service page or send an enquiry pre-filled with that service.

Industry knowledge, shown not told

02 // INDUSTRY CONTEXT

Where explosive atmospheres occur

Hazardous areas exist wherever flammable gases, vapours or combustible dusts can mix with air. These are typical environments where classification, Ex equipment and periodic inspection apply.

Petrochemical & refining

Flammable gases and vapours from process plant, pumps, vents and sampling points.

GAS ZONES 0-2

Fuel storage & handling

Tank farms, depots, loading bays and dispensing, where vapour can collect around equipment.

GAS ZONES 1-2

Mining & minerals

Operations where methane or combustible dusts may be present, alongside conveyors and bulk handling.

GAS DUST

Grain, sugar & food

Silos, mills and conveyors handling fine organic powders that form explosive dust clouds.

DUST ZONES 20-22

Chemical, pharma & coatings

Solvent handling, mixing, spray booths and powder processing.

GAS DUST

Wastewater & biogas

Digesters, gas holders and pump stations where methane is produced.

GAS ZONES 1-2

4 Where explosive atmospheres occur. Six typical environments — petrochemical, fuel storage, mining, grain and food, chemical and coatings, wastewater and biogas — each tagged gas or dust. It tells visitors immediately that you understand their world.

03 // EX QUICK REFERENCE

Zones, equipment protection levels and temperature classes

The fundamentals behind every hazardous area decision we make. Select a zone to see how it is defined and which equipment protection levels are permitted.

ZONE CLASSIFICATION

GAS DUST

GAS

Zone 0

GAS

Zone 1

GAS

Zone 2

Zone 1

An explosive gas atmosphere is likely to occur periodically or occasionally in normal operation.

LIKELIHOOD

Likely in normal operation

PERMITTED EPL

Ga, Gb

TEMPERATURE CLASS

MAX. SURFACE TEMP.

T1		≤450°C
T2		≤300°C
T3		≤200°C
T4		≤135°C
T5		≤100°C
T6		≤85°C

IIA Representative gas: propane

IIB Representative gas: ethylene

IIC Representative gases: hydrogen, acetylene

Summary for orientation only. Classification and equipment selection must follow the applicable standards (SANS 10108, SANS/IEC 60079 series).

5 Ex quick reference (interactive). Switch between gas and dust, select a zone, and see its definition, likelihood and permitted equipment protection levels — alongside temperature classes T1–T6 and gas/dust groups. A practical tool engineers will return to.

TRY IT · Choose “Dust”, then Zone 21

Standards and the way you work

REGULATORY FRAMEWORK

The legislation and standards behind the work

Electrical and Ex work in South Africa sits within a defined legal and standards framework. This is how our services map to it.

REFERENCE	WHAT IT COVERS	RELATED SERVICE
OHS Act 85 of 1993	Electrical Installation Regulations, 2009 — the legal basis for the Certificate of Compliance.	Certificate of Compliance
SANS 10142-1	The wiring of premises — low-voltage electrical installations.	Installations
SANS 10108	Classification of hazardous locations and selection of equipment for use in them.	Area classification
SANS 60079-0	General requirements for Ex equipment, including equipment protection levels and marking.	Ex equipment
SANS 60079-14	Design, selection and erection of electrical installations in explosive atmospheres.	Ex installations
SANS 60079-17	Inspection and maintenance of electrical installations in explosive atmospheres.	Audits · InspectX

General reference only. Always apply the current edition of each standard and regulation.

6 The legislation and standards behind the work. The OHS Act and Electrical Installation Regulations, SANS 10142-1, SANS 10108 and the SANS 60079 series — each linked to the matching Brain Industries service.

04 // HOW WE HELP

One partner across the hazardous area lifecycle

Safety in a hazardous location depends on every step being done correctly. Because we work across all of them, nothing is lost between classification, equipment, installation and inspection.

STEP 01	STEP 02	STEP 03	STEP 04	STEP 05
Classify Identify where explosive atmospheres can occur and define the zones. AREA CLASSIFICATION →	Specify & supply Select and supply equipment suited to the zone, group and temperature class. EX EQUIPMENT →	Install Install equipment so that its protection concept is maintained. INSTALLATIONS →	Inspect & certify Audit electrical and earthing systems and certify compliance. AUDITS →	Digitise Record ongoing inspections with QR codes and photo verification. INSPECTX →

7 One partner across the hazardous area lifecycle. Classify → Specify & supply → Install → Inspect & certify → Digitise, each step linking to the relevant service.

InspectX and company story

05 // DIGITAL INSPECTIONS

Lose the paperwork. Inspect with a scan.

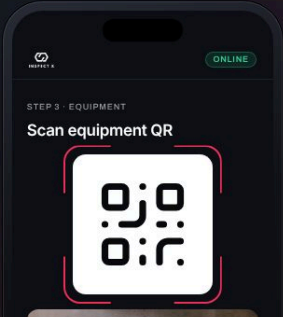

InspectX is a web-based, QR-code-driven inspection platform for hazardous and industrial environments. Step through an inspection below.

[Explore InspectX →](#)

01 **Log in & verify competency**
Competent users conduct inspections; non-competent users have read-only access.

02 **Select site & inspection type**
Choose the site and zone, then visual, close or detailed — weekly or monthly.

03 **Scan the QR code**
Walk up to the equipment, scan its unique QR code and take a

8 InspectX walkthrough. Five steps — log in, select site, scan the QR code, follow the guided checks, outcome and sync — each updating the phone screen alongside. It plays automatically and can be clicked through.

TRY IT · Click “Scan the QR code”

06 // ABOUT US

Electrical expertise with a hazardous area focus

We are an electrical company specialising in electrical and hazardous area services and product supply, and we take pride in quality, professional service delivery for all of your electrical and Ex requirements.

Our work is led by a qualified M.I.E with more than 25 years of experience — experience that extends across the globe, with many completed projects for clients who are leaders in their industries.

12 Footer with every service, contacts, address, registration number, Privacy Notice and PAIA Manual.

Service pages and InspectX

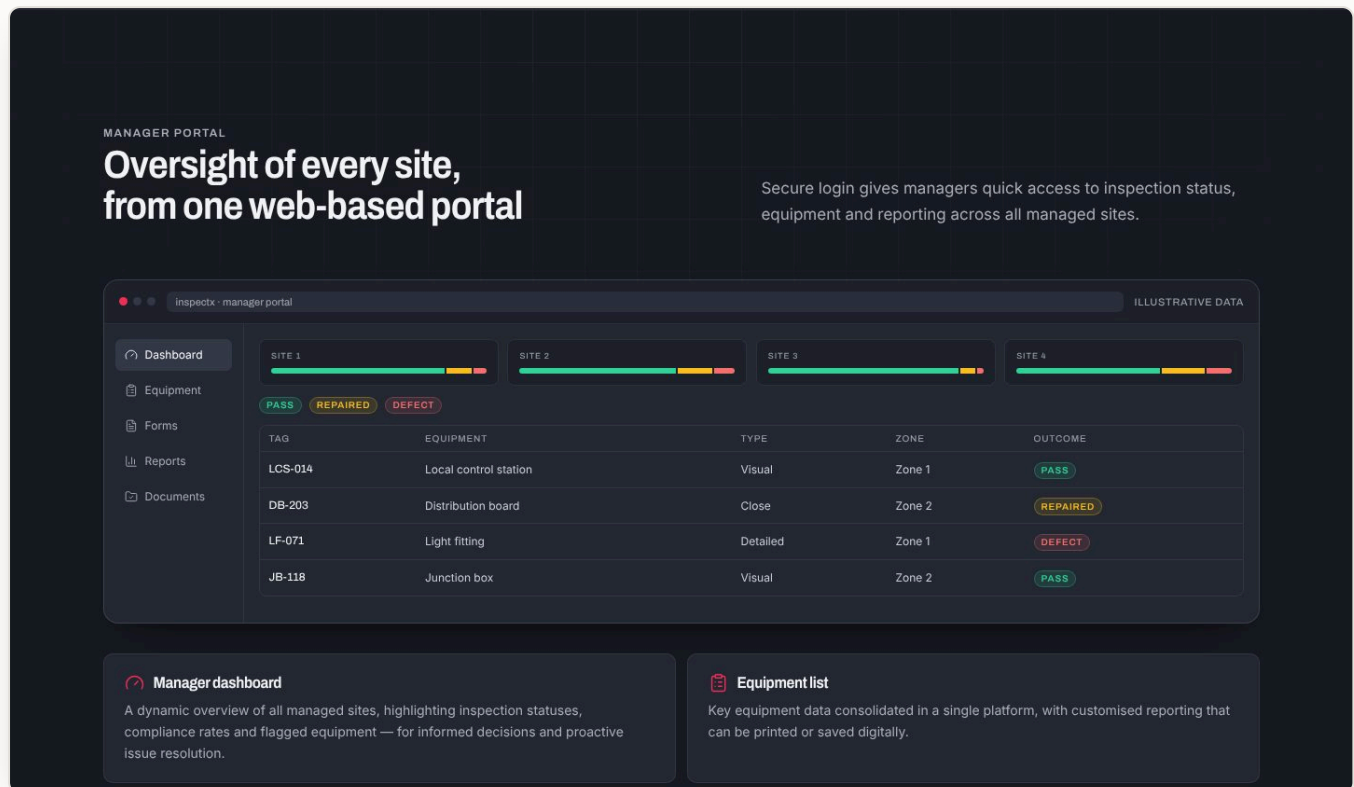

13 Eight dedicated service & product pages. Each has a full explanation, what's included, typical applications, an enquiry panel that stays in view, related services and previous/next navigation. Every page is individually findable on Google.

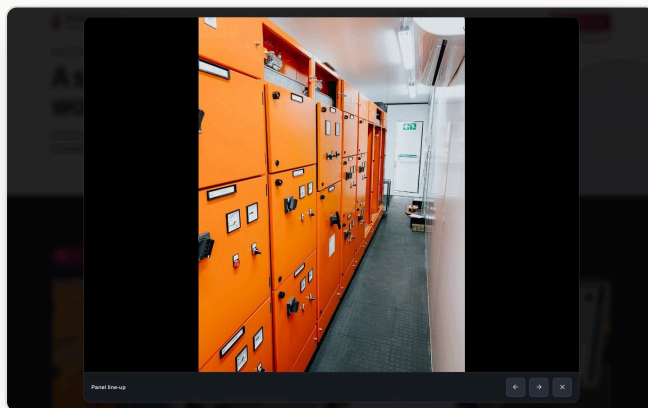

14 InspectX page. Why it exists (SANS 60079-17 periodic inspection), inspection disciplines, nine capabilities, the app walkthrough, the Pass / Repaired / Defect outcomes and downloadable brochures.

Portal, gallery and enquiries

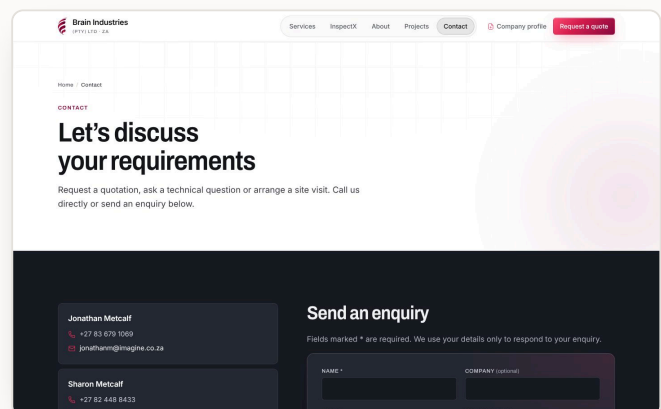

15 InspectX manager portal illustrated — site status, outcomes and recent inspections (clearly labelled as illustrative data).

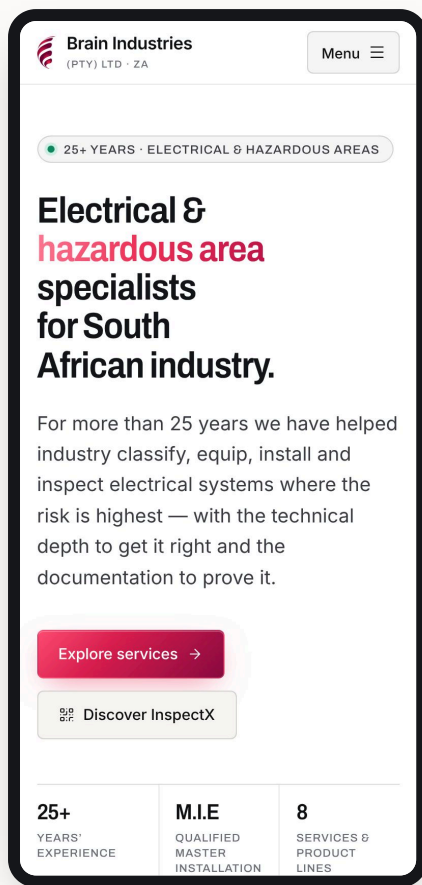

16 Projects gallery with filters and a full-screen viewer.

TRY IT · Filter “Products”, open a photo, use ← →

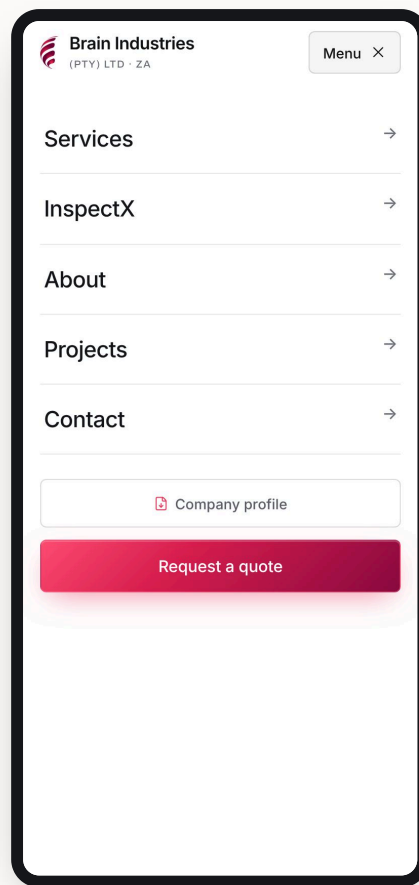

17 Contact & quote form — all contacts, directions, and a validated form with POPIA consent. Service pages pre-select the enquiry type.

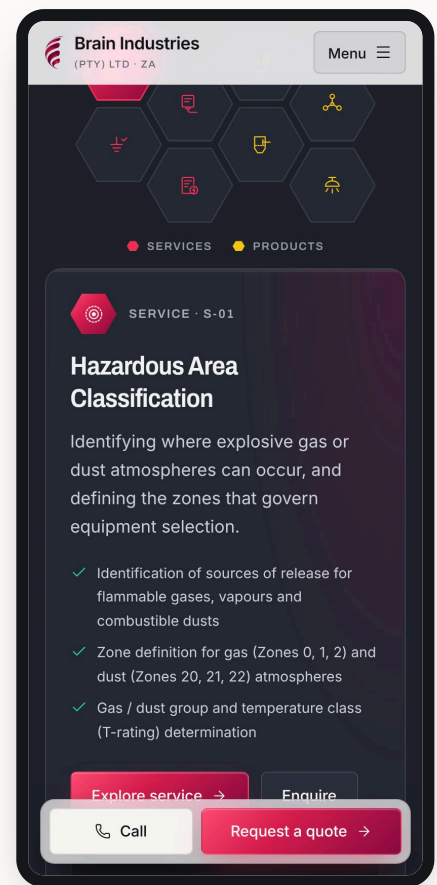

Designed for the phone in a site manager's pocket

Clean opening on a white background, with the key facts in view.

Full-screen menu with large, easy-to-tap links.

Service honeycomb and a **Call / Request a quote** bar that follows the visitor.

Every page has been checked at phone, tablet and desktop sizes. Animations switch off automatically for visitors who prefer reduced motion.

What we need from you before going live

Please confirm

- **Office address** — old site: 378 Main Street; profile & PAIA: 402 Julius Jeppe Street (currently used).
- **Registration number** 2016/099333/07 (from the Privacy Notice).
- **M.I.E** — Master Installation Electrician; any name/registration to show.
- **Products** — current TEP Ex supply, the HALO LED range, and Roto Reflector colours.
- **Certificates of Compliance** — registration of the person issuing CoCs.
- **Dust classification** — that dust areas (Zones 20–22) are classified as well as gas.
- **Gallery captions** and photo ownership; rights to the LED lighting image.
- **LinkedIn link** — personal profile or a company page.
- **PAIA Manual** — appears to contain another company's content (solar/PV records); needs review by your Information Officer.
- **InspectX** — SAP integration status; illustrative app/portal screens are acceptable.

Going live

1. **Enquiry email.** Choose the address that should receive website enquiries; we create a free Web3Forms key for it.
2. **Approve the preview.** Final content changes are made in one place and the site rebuilds automatically.
3. **Publish.** The site is published on GitHub Pages (free hosting).
4. **Point the domain.** Update the DNS for brainindustriessa.com (and www) — about 15 minutes of work; up to 24 hours to take effect.
5. **Check & switch off Wix.** Once the new site is live on HTTPS, cancel the Wix plan. If the domain is registered through Wix, it is transferred first.

Email is unaffected

Your email addresses (@imagine.co.za) are separate from the website and will not change.
